GRADE BC

CORE Poplar - #1 Core, machine composed with 2-step calibration

GLUE E-Zero, Type II, Water resistant interior glue lines. CARB2 Certified.

| SHEET SIZE | THICKNESS (mm) |
|-------------|-----------------|
| 2400 x 1200 | 4, 6, 9, 12, 17 |
| 2700 x 1200 | 9, 12 |

TIGERLINE is manufactured using E-Zero, formaldehyde free interior glue lines and the plywood is untreated. This limits the ply to interior, non-structural use only.

KEYLAND supply a range of 100% Okoume marine ply manufactured to BS1088 specifications for external and marine applications.

What is Okoume?

Okoume is the wood of the Okoume tree (*Aucoumea klaineana*), a species native to west-central Africa, in particular Gabon.

The timber of this tree is known by many names, among them Okoume and Gaboon.

Most Okoume is sold as plywood but the solid timber can be used in joinery or furniture applications.

The tree generally has interlocked grain that produces a good natural luster.

Okoume is one of the tropical hardwoods used for exterior plywood manufactured to BS (British Standard) 1088 specifications for use in marine applications.

TIGERLINE is a lightweight, versatile hardwood with a pale pinkish-brown lustre.

A popular and cost-effective interior lining solution which takes a paint, oil or stain finish well. Light weight, but perfect for high impact zones like garages, sheds & commercial buildings where strength is desirable but aesthetics are equally important.

Shelter Forest International, the global manufacturers of the TigerPLY™ range utilise resources that highlight a new level of environmental responsibility. They believe the “3 S’s” of silviculture, stewardship and sustainability are core components of a successful 21st Century business strategy. The TigerPLY™ global supply chain is key to providing customers the certainty their products are being sustainably sourced and leaving a positive impact on future generations.

KEYLAND™ is a specialist provider of high quality decking, plywood, outdoor timbers and fixings. Our champion products are produced from sustainable plantation forests and utilise leading edge technology to produce superior, natural wood products.

KEYLAND™ products have proven performance in New Zealand and various offshore markets with continual improvement and product innovation to ensure the products are the best they can be in terms of performance, appearance and environmental impact.

Keylands specialist range of products include decking, deck fasteners & accessories and Tigerply plywood.
